

DATACOM

Sphere

Intranet

Solution

Datacom Sphere offers a corporate intranet template utilising Microsoft SharePoint.

The template features fully responsive design, meaning content is shown in an optimal way for the device being used, be it PC, tablet or phone.

The Intranet is usually deployed on premise, due to the large bandwidth and fast speeds required for document transfer. Datacom are however happy to host the solution in our data centres or in public cloud in Australia - Azure or AWS.

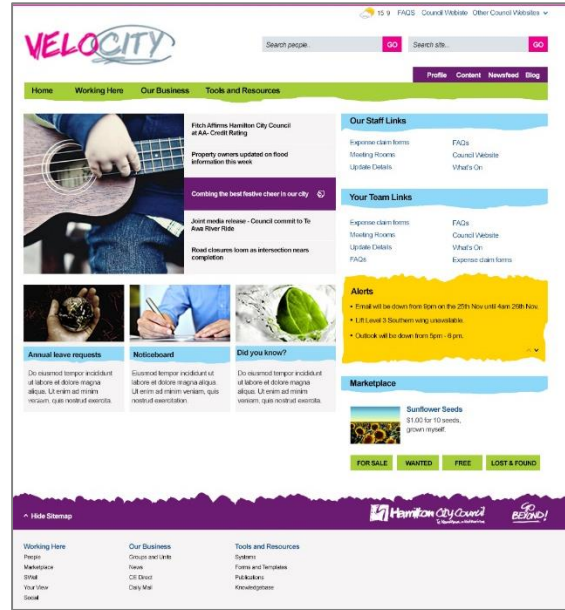

Integration with AD ensures staff directories can be searched, including user attributes defined by you. Users can collaborate and interact.

Benefits

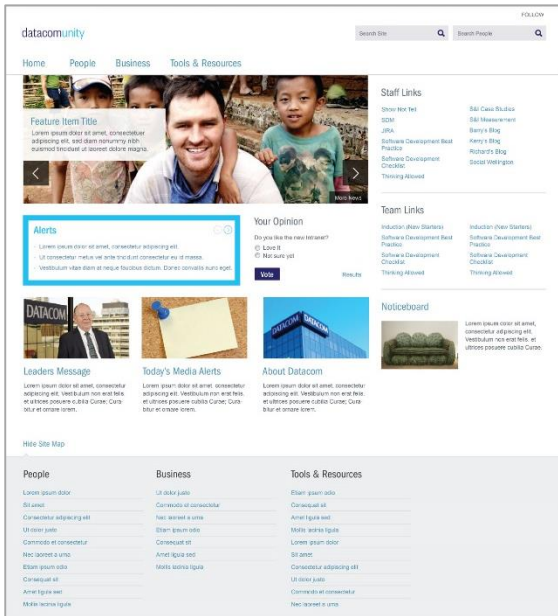

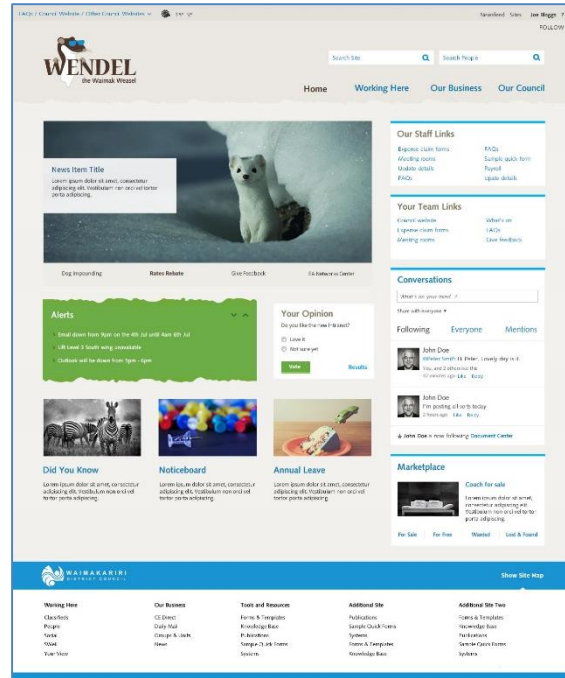

The template has been implemented and tested at six sites (at time of writing). This means a proven, low cost, low risk project with a guaranteed result.

Content authoring offers all the features you would expect, including approval workflows, set publish and expiry dates and times, and automated content review alerts.

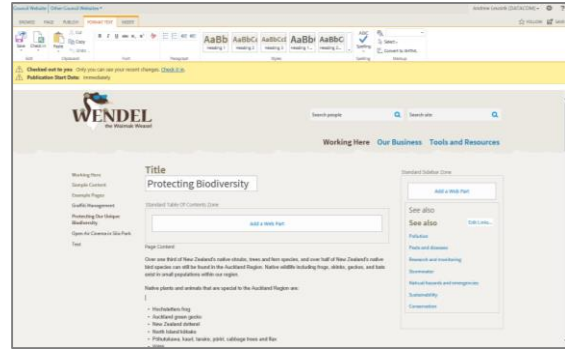

The shared model means all Councils benefit from new features without having to fund them individually, with a strong user group having input to the roadmap.

All the sites shown on this page use the same template, and receive regular upgrades with patches and new features.

Content Authoring:
